

Bleichert AL30 Roller Conveyor

Bleichert Standard

Description

- Engineered to transport parts directly on the conveyor or for using pallets to hold the parts.
- Ideal for heavy engine blocks and heads.
- Engineered for adaptability to future changes in part/pallet weights. Aluminium profiles are punched 20mm on center to accommodate changes in roller pitch.
- Engineered to handle part/pallet weights of up to 500kg or more depending on the application.
- Variable conveyor widths up to 1400mm depending on the application.
- Variable selection of rollers to suit the application. Rollers can also be hardened for rougher part/pallet surfaces.
- Rollers are fixed . Use (1) drive per station to accumulate parts or pallets.
- Each conveyor section consists of two extruded aluminium side profiles with side guides, chain supports, drive chain, drive motor, rollers and safety covers. Side guides can be steel or UHMW.
- Conveyor is positively driven via chain to chain.
- Chain is guarded throughout the conveyor for operator interface.
- Slots are integrated into the profile and used in conjunction with T-nuts to install switch brackets, support legs, covers etc.
- Available accessory devices such as curves, stops, turntables, and precision locate units for automatic stations.
